

EXPERT-DRIVEN DEVELOPMENT · SUPERVISOR ORIENTATION

Your people are waiting for you to say yes.

A leadership briefing on permission culture, evaluating AI-assisted work, and the apprentice problem.

WEEK 5

LEADERSHIP BRIEFING

30 MIN · OR EXTENDED JOINT SESSION

SPEAKER NOTES

BRIEFING — 30 MIN

Open warm. Eye contact. "Welcome — this is the highest-leverage 30 minutes in the entire EDD program. One supervisor creating permission culture enables an entire section. One supervisor creating fear culture kills adoption across their command. We're going to make sure you're the first kind."

State the contract: **"I'll respect your 30 minutes. In exchange, I need you fully here — not on email."** Then advance.

JOINT SESSION — EXTENDED

If supervisors are sitting alongside their builders, name it: "The people you supervise are in this room. By the end, they should know exactly what 'yes' sounds like from you, and you should know exactly what to ask them when they bring you AI-assisted work."

TRANSITION

"Before we get into anything — let me explain why this week looks a little different from Weeks 1 through 4."

WEEKS 1-4 · BUILDERS

Marines learning to use AI and build tools

- Fluency, prototyping, Power Platform, advanced workshops
- Hands-on by design — students were the workers
- Time was spent *building*

WEEK 5 · LEADERSHIP

Supervisors and decision-makers

- Section leaders, OICs, SNCOs, civilians who approve work
- You don't need to build — you need to *evaluate* and *permit*
- Time is spent on culture, judgment, and three decision exercises

SPEAKER NOTES

BRIEFING — 30 MIN

"Up to this week, the EDD program has been about helping Marines build with AI. This week is about you — the people who decide whether they're allowed to. Different audience, different objective."

Be direct: nobody is asking supervisors to write Python or stand up a Power App. The ask is to recognize good AI-assisted work when it lands on your desk and to set the conditions where good work can land on your desk in the first place.

JOINT SESSION — EXTENDED

If builders are present: "Builders, today the spotlight is on your supervisors. You're here as observers and as coaches — by the end, your supervisors will know what to ask you, and you'll know what they'll be looking for."

Pause and check the room. Ask one supervisor: "What's been your experience with AI in your section so far — anyone using it that you know of?" Listen. This sets up Module 2.

Pick the mode that fits today

MODE A • 30 MINUTES

Leadership briefing

The standalone briefing. Five short modules. Tight script. Closes with one specific ask.

- 5 min • Why this matters now
- 5 min • Permission culture
- 10 min • Evaluating AI-assisted output (2 scenarios, light debrief)
- 5 min • The apprentice problem
- 5 min • Quick reference + close

MODE B • 60-90 MINUTES

Joint session with builders

Same slides. Speaker notes branch into discussion prompts and a third decision exercise.

- Each module pauses for floor discussion
- Scenarios A and B run as paired-talk + report-out
- Adds Exercise C (Spot the Apprentice Risk)
- Builders share one real artifact for live evaluation

SPEAKER NOTES

BRIEFING — 30 MIN

"We're running the 30-minute version today. I'll narrate, you absorb, we close on time. There are two scenarios and a quick-reference card you can screenshot."

JOINT SESSION — EXTENDED

"We're running the joint version. Same slides, but at three points I'm going to stop and ask you to talk to the supervisor or builder next to you for 3-5 minutes, then we'll surface what you heard."

Set expectations on participation. "If you're a supervisor, your job is to ask; if you're a builder, your job is to answer like you'd answer your boss."

Facilitator: the published joint-session agenda — extended timing, Exercise C, room setup, optional live tool review and

Five modules · 30 minutes (or 60–90 in joint mode)

Time	Module	Focus
0:00 – 0:05	1. Why this matters now	The permission gap, the data, the directive
0:05 – 0:10	2. Permission culture	What "yes" sounds like; what kills adoption; guard rails (not roadblocks)
0:10 – 0:20	3. Evaluating AI-assisted output	Four questions; Exercises A & B
0:20 – 0:25	4. The apprentice problem	Junior development, three supervision checks; Exercise C (joint)
0:25 – 0:30	5. Quick reference & commit	Reference card, leadership commitment, Week 6 preview

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the row quickly: "Five modules. Three are short briefing blocks. Two — Module 3 and Module 4 — have decision exercises so you leave with practiced reps, not just talking points."

Do NOT read every cell aloud. Land the tempo: "Five short blocks, two with hands-on judgment work."

JOINT SESSION — EXTENDED

Add: "In joint mode, every module ends with floor discussion. Plan on 60–90 minutes total. Builders are paired with their supervisors for the scenario debriefs."

TRANSITION

"Before any of that — here's the one sentence you need to leave with if you forget everything else I say."

Your people are **already
using AI.
They're waiting for you to
say **yes**.**

SOURCE: MOLLICK, *ONE USEFUL THING* · ENTERPRISE FIELD RESEARCH

SPEAKER NOTES

BRIEFING — 30 MIN

Slow down. Let the slide breathe for a beat before you talk. "Mollick's research is explicit: across organizations, workers are already using AI tools. They're not asking permission, and they're not telling management. They're worried about how their organization will react. The permission gap — not the technology — is the largest barrier in your section."

Put a fine point on it: "If you do nothing else this week, decide whether your section knows you've said yes."

JOINT SESSION — EXTENDED

Pause for honest answers. Ask the supervisors: "Raise your hand if you suspect someone in your section is using AI for official work that you haven't formally approved."

Then ask the builders (without singling anyone out): "Raise your hand if you've ever used AI for work and not mentioned it to your supervisor." The hands tell the story.

TRANSITION

"Why now? Why this year? Five data points."

MODULE 1 • 5 MINUTES

Why this matters now

The data, the directive, and what it means for your section.

SPEAKER NOTES

BRIEFING — 30 MIN

Quick beat. "Five minutes on context. The data is unambiguous: AI adoption with leadership support produces measurable results. AI adoption without it fails consistently."

JOINT SESSION — EXTENDED

Same intro. Add: "Builders, listen for which of these data points you'll cite the next time someone asks why we're doing this."

TRANSITION

Advance to the data wall.

Five reasons "later" is no longer an option

~80%

workers abandon AI within weeks *without* support
MICROSOFT

25 min

/day saved *with* proper support
UK GOV · 20K EMPLOYEES

2026

"Year of Military AI Dominance"
DOW AI STRATEGY · JAN 2026

49B

new dedicated AI/ML officer
career field
ARMY · OCT 2025

018/26

MARADMIN designating
GenAI.mil enterprise
MARINE CORPS

The pattern: **everywhere AI deployment was paired with leadership support, it stuck.**
Everywhere it wasn't, it died.

Sources: Microsoft Work Trend Index · UK GDS 2025 · DoW AI Strategy Jan 2026 · Army HRC · MARADMIN 018/26.

SPEAKER NOTES

BRIEFING — 30 MIN

Read these as a row, not as bullets. "Microsoft tracked hundreds of thousands of users — 80% quit within weeks when there was no support. UK government gave 20,000 workers AI with training; they got 25 minutes back per day. DoW called 2026 the Year of Military AI Dominance. Army stood up an AI officer career field. Marine Corps designated the enterprise platform. Five different organizations, one direction of travel."

Don't apologize for the urgency. The Marines in this room respond to "this is the directive."

JOINT SESSION — EXTENDED

Pause after the data. Ask: "Which of these five is most likely to land with your CO if you have to defend an AI decision next week?" Take 2–3 answers.

TRANSITION

"So what does that mean operationally?"

It's **not optional** anymore.

Your command directed it. The DoW directed it. The other services are already past the starting line. Your section is either reporting AI activity or reporting why it isn't.

SPEAKER NOTES

BRIEFING — 30 MIN

Short and direct. "AI is a SITREP item. That phrase is the ammunition you carry out of this room. When somebody says 'we're not doing the AI thing yet,' you have a one-line answer: it's a SITREP item."

JOINT SESSION — EXTENDED

Optional: "Builders — when your supervisor says 'AI is a SITREP item,' that's the green light. Bring them something to report."

TRANSITION

"Now — your role. Module 2 is the shortest of the day, and the most important behavior change."

MODULE 2 · 5 MINUTES

Permission culture

What "yes" sounds like · what kills adoption · guard rails, not roadblocks.

SPEAKER NOTES

BRIEFING — 30 MIN

Frame it: "Five minutes. The behavior change you make starting Monday. We'll do the language of 'yes' first, then the things that quietly kill adoption, then the boundaries you should keep."

JOINT SESSION — EXTENDED

Add: "Builders — you're going to hear specific phrases from your supervisor today. Notice which ones you've already heard, and which ones you'd like to hear."

The language your section is listening for

WHAT "YES" SOUNDS LIKE

- "Try it. Show me what you build."
- "I don't need to understand *how* it works. I need to understand *what* it does."
- "If it saves time and meets quality standards, we should do it."
- Protected time for learning — even 30 minutes a week.
- Public recognition when somebody builds something useful.

WHAT KILLS ADOPTION

- "I need to approve every AI interaction."
- "Don't use AI for anything official."
- "We'll wait until there's a formal policy."
- Punishing experimentation failures.
- Treating AI use as suspicious or lazy.

SPEAKER NOTES

BRIEFING — 30 MIN

Read 1–2 from each column, don't read all. "On the left, the language of yes. On the right, the four phrases that quietly drive AI use underground in every organization where they're spoken."

Land it: "Pick one phrase from the left to use this week. Pick one phrase from the right to **stop** using."

JOINT SESSION — EXTENDED

Run the room. "Supervisors — turn to the builder you came in with and tell them which left-column phrase you commit to using this month. Builders — tell your supervisor which right-column phrase you've heard at least once. Two minutes."

Surface 2–3 commitments out loud. Do NOT name-and-shame the right-column phrases.

TRANSITION

"Beyond language — four behaviors specifically not to do."

What supervisors should *not* do

1 Don't ban AI use outright.

Prohibition drives it underground where you can't guide it. You lose visibility and you lose control.

2 Don't require approval for every AI interaction.

Creates a bottleneck that kills velocity. Review the output, not every query.

3 Don't assume AI output is automatically wrong.

Reflexive skepticism kills adoption. Verify like any work product — evidence-based, not assumption-based.

4 Don't skip verification because the Marine is experienced.

Seniority does not eliminate hallucination risk. Everyone verifies.

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the four. Each one a single beat: "Don't ban it. Don't gate every interaction. Don't assume it's wrong. Don't skip review for senior Marines."

Anchor #1 emphatically: "Prohibition is the worst possible position. You don't get less AI use — you get the same AI use, but invisible."

JOINT SESSION — EXTENDED

Ask: "Which of these four is the easiest mistake to make?"
Most rooms pick #2 (gating every interaction). Use that as the bridge to guard rails.

TRANSITION

"The alternative isn't 'no rules.' It's the right rules in the right places. Guard rails, not roadblocks."

The four boundaries that always apply

- All tools go through the **EDD SOP** before deployment.
- AI-generated content for official use must be **human-reviewed**.
- **Sensitive or classified information** never enters unauthorized AI systems.
- Failed experiments are **shared as learning** — not punished as waste.

Default posture

"Yes, with appropriate review."

That single sentence is your operating policy until something specific tells you otherwise.

SPEAKER NOTES

BRIEFING — 30 MIN

"Four boundaries. Tools go through the SOP. Official output gets reviewed. Classified data never touches an unauthorized system. Failures get shared, not punished."

Then anchor on the green box: "Your default answer when somebody asks if they can try AI for a task: 'Yes, with appropriate review.' Memorize that sentence."

JOINT SESSION — EXTENDED

Ask supervisors: "Which of the four boundaries is currently the weakest in your section?" Take 2–3 honest answers — usually it's #4 (sharing failures).

TRANSITION

"Now — when a Marine actually shows up at your desk with AI-assisted work, what do you ask? Module 3."

MODULE 3 · 10 MINUTES

Evaluating AI-assisted output

Four questions · two practice scenarios · the standard you already use.

SPEAKER NOTES

BRIEFING — 30 MIN

"This is the longest block — ten minutes — because evaluation is the supervisor skill. Four questions, then two scenarios so you've practiced the questions before you need them on Monday."

JOINT SESSION — EXTENDED

Add: "In joint mode, supervisor and builder pair up for each scenario. Supervisor asks the four questions; builder responds as if their own work were under review."

Four questions — every time

1 Does it work?

Can you demonstrate it doing what it claims to do — live, end to end?

2 Is the output accurate?

Are facts, references, citations, numbers, and dates verifiable against source material?

3 Does it follow the SOP?

Has it gone through the proper review path (peer, SME, security as required)?

4 Does it save time?

Is there a credible before/after comparison — and is the QA time reasonable for the gain?

You do *not* need to evaluate *how* AI produced it. The same standards as any work product apply: **if a Marine handed this to you without mentioning AI, would you sign it?**

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the four crisply. Don't read the sub-text on each — paraphrase: "Does it work — show me. Is it accurate — verify the facts. Did it follow the SOP — was it reviewed properly. Does it save time — what's the before-and-after."

The takeaway sentence is the punchline. Read it word for word: "If a Marine handed this to you without mentioning AI, would you sign it? That is the standard."

JOINT SESSION — EXTENDED

"Builders — those four questions are also your pre-flight checklist. If you can answer them before you walk into your supervisor's office, you'll get to yes faster every time."

TRANSITION

"Let's apply them. Scenario A."

AI-generated leave policy summary

SCENARIO

A Marine presents you with a one-page summary of leave policy for Emergency Leave Authorization. The summary is clear, well-formatted, and cites **MCO P1050.3K**. The Marine tells you it was generated using ChatGPT and reviewed for accuracy. They want to distribute it to the section.

YOUR MOVE

What do you ask first? What gets the green light? What earns a "not yet"?

SPEAKER NOTES

BRIEFING — 30 MIN

Read the scenario aloud. Then give the room 30 seconds of silent thinking. Take ONE answer from one supervisor: "What's the first thing you'd ask?" Don't grade the answer — just receive it. Advance.

JOINT SESSION — EXTENDED

Run as paired discussion. Three minutes. Each supervisor asks their builder partner the four questions against this scenario. Then surface 2–3 questions from the room before advancing to the debrief slide.

TRANSITION

"Here are the questions a strong supervisor lands on this scenario."

What a strong supervisor asks

- **Can you verify the MCO citation?** Pull up the actual order. Does the summary match?
- **What did you give the AI as input?** Full MCO text, or general questions? Context quality drives output quality.
- **Who reviewed this for accuracy?** AI-generated policy needs SME verification — not just proofreading.
- **What's the update path?** If policy changes, who refreshes this — or do outdated summaries circulate forever?

The principle

The Marine did the right thing — they brought it to you. Your job is to verify the *output* and the *process*, not interrogate the tool. Approve, ask for SME sign-off, or send it back with a specific gap.

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the four prompts as your modeled response. Don't lecture — model. "These are the four questions I would ask. Yours might be sharper. The point is having four ready instead of one panicked one."

JOINT SESSION — EXTENDED

Ask supervisors: "Did your version of these questions get to the same place?" Then ask builders: "If your supervisor asked you these four, which one would you have the weakest answer to?"

TRANSITION

"Different shape of work — Scenario B."

Automated reporting tool

SCENARIO

A Marine built a Python script that pulls data from a shared spreadsheet and auto-generates the weekly operations summary. **It runs in 30 seconds. The manual process took 90 minutes.** The Marine wants approval to use it for official reporting.

YOUR MOVE

The time savings are real. The risk is also real. Which questions go first?

SPEAKER NOTES

BRIEFING — 30 MIN

Same drill as Scenario A. Read it, 30 seconds of silence, take one answer, advance.

Note that this scenario is harder — the time savings are seductive, and the failure modes are subtle. Hold the room from rushing to "approved."

JOINT SESSION — EXTENDED

Paired discussion, three minutes. Builders should respond honestly — most have built something like this and most have **not** done all the QA. Use this as the teaching moment.

TRANSITION

"Here's the strong-supervisor playbook for an automation tool."

What a strong supervisor asks

- **Can you demonstrate it with live data?** Show input, process, output. Walk through one full cycle in front of me.
- **What happens when input data is malformed?** Does it fail gracefully — or does it generate confident, incorrect reports?
- **Who else has reviewed this code?** Per the EDD SOP, automation tools need peer review and security review before operational use.
- **How do we verify accuracy each week?** Sampling checks, output validation — what's the ongoing QA?

The trap

"It saves 89 minutes" is not a Yes. It's a reason to take the four questions *more* seriously, not fewer. The most dangerous AI-assisted work is the kind that's obviously valuable.

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the four. Then land the trap: "When the time savings look obviously good, that's exactly when supervisors skip the verification questions. Don't."

JOINT SESSION — EXTENDED

Optional builder follow-up: "Of the builders here, who has actually run their own tool through the SOP peer + security review?" The honest hand count tells you where your gap is.

TRANSITION

"Two scenarios in your pocket. Now — the long-term risk that supervisors are uniquely positioned to prevent. Module 4."

MODULE 4 • 5 MINUTES

The apprentice problem

The risk you can't see this year — and that no one else will catch.

SPEAKER NOTES

BRIEFING — 30 MIN

Mark a tonal shift: "We've talked about today. This block is about five years from now. It's the strategic risk only supervisors can prevent, because nobody else is positioned to see it."

JOINT SESSION — EXTENDED

"Supervisors — this module is for you. Builders — listen for what your career path looks like if your supervisors get this wrong."

"That training pipeline that was always implicit has broken — and it has to be reconstructed."

— ETHAN MOLLICK · WHARTON, 2025

–35%

Entry-level job postings in AI-exposed occupations (*Jan 2023 → Jun 2025*)

–13%

Employment among workers age 22–25 in those fields

5–10 yrs

until organizations that cut junior roles face an expertise shortage they cannot hire out of

SPEAKER NOTES

BRIEFING — 30 MIN

Slow down. Read the Mollick quote with weight, then walk the three numbers right to left.

"Entry-level postings in AI-exposed jobs are down 35%. Employment among 22- to 25-year-olds in those fields is down 13%. The civilian world is producing a generation of architects who never laid a brick — people who can operate AI but cannot operate without it. The military cannot afford that. We will be operating without it sometimes."

JOINT SESSION — EXTENDED

Ask the room: "Think about the most formative task of your first three years. The one where you learned judgment, not just procedure. Now imagine AI had done it for you. What didn't you learn?" Take 2–3 answers.

TRANSITION

"So what does a supervisor actually do about it? Three checks."

Three supervision checks for junior development

1 Can the Marine explain the output without referencing AI?

If they can't walk you through the logic, they didn't learn — they copied.

2 Require periodic tasks completed without AI.

Preserves baseline competency. If the tool disappears, can they still operate?

3 Use AI output as a teaching tool.

"Is this correct? How would you verify it? What would happen if this number were wrong?" That's where judgment is built.

Goal: AI-augmented Marines, *not* AI-dependent ones.

SPEAKER NOTES

BRIEFING — 30 MIN

Walk the three. Anchor each: explain-without-AI, periodic-without-AI, AI-as-teaching-tool.

Land the goal sentence: "Augmented, not dependent. That's your sign-off line on every junior Marine's development plan."

JOINT SESSION — EXTENDED

Ask supervisors: "Which of these three are you already doing — and which are you going to add?" Get specific commitments aloud where possible.

TRANSITION

"One more apprentice-problem reminder before we get to the wrap."

Spot the apprentice risk

SCENARIO · JOINT DISCUSSION

A new SgtSec NCO is assigned to draft initial counseling statements for three junior Marines. They use ChatGPT to produce all three drafts in under five minutes. The drafts are technically correct. They sign and submit them. Their supervisor approves them without comment.

What was lost

- The new NCO never wrestled with how to characterize a Marine's performance.
- They didn't develop the language a counseling statement actually requires.
- They learned that AI handles people work — and that the supervisor doesn't notice.

What a permission-culture supervisor does

- Approves AI for the *format and structure*, not the judgment.
- Requires the NCO to write the assessment paragraphs from scratch.
- Reviews together: "What did the AI miss about this Marine?"

SPEAKER NOTES

BRIEFING — 30 MIN

If you're tight on time, walk the scenario quickly and skip the cols. The point is to plant the pattern: developmental tasks deserve a different default than routine tasks.

JOINT SESSION — EXTENDED

Run as full-room discussion, 5–7 minutes. Ask: "What would you have done differently as either the NCO or the supervisor?" Capture answers visibly. End with: "Counseling statements are a developmental task. Name another developmental task in your section that AI is currently doing instead of being a teaching tool."

TRANSITION

"Last block — the reference card you'll actually carry."

MODULE 5 · 5 MINUTES

Quick reference & commit

A card for your screen · the tools · further reading · Week 6 preview · the ask.

SPEAKER NOTES

BRIEFING — 30 MIN

"Five minutes left. We're going to give you a screenshot-able reference card, name the tools your Marines should be using, point at two short briefs you can hand your CO, preview Week 6, and close with the one specific ask."

JOINT SESSION — EXTENDED

If running long, the apprentice exercise can extend; this module is mostly reference and can be condensed if needed.

Supervisor quick reference: AI-assisted work

3 QUESTIONS BEFORE YOU APPROVE

- **Demonstrate it.** Live demo with real inputs.
- **Verify accuracy.** Specific checks, not general trust.
- **Who reviewed it?** Peer · SME · security per the SOP.

3 SIGNS OF HEALTHY AI USE

- The Marine can explain the output *without* referencing AI.
- Failed experiments are shared openly — learning culture.
- AI is saving time on routine tasks, not replacing judgment tasks.

3 WARNING SIGNS

- Marine cannot answer basic questions about their own output.
- AI use is hidden or apologized for — sign of a fear culture.
- Junior Marines are skipping foundational tasks entirely.

Default posture: "Yes, with appropriate review."

SPEAKER NOTES

BRIEFING — 30 MIN

Tell the room directly: "Take a phone picture of this slide right now. This is the card. Three to ask, three healthy signs, three warning signs, one default posture."

Don't read all nine. Read the three card headlines and the default posture. The card does the rest.

JOINT SESSION — EXTENDED

Have one supervisor read each card out loud. Reinforces ownership without adding lecture time.

TRANSITION

"Quick note on what tools your Marines should actually be using."

Tools your Marines will use

GenAI.mil

Default for DoD networks. IL5-authorized for CUI per MARADMIN 018/26. Hosts Gemini, Grok, ChatGPT inside the DoD boundary. ~1.1M users.

CamoGPT (Army)

Supplementary capabilities: API access, tool calling, file upload, shared workspaces, IL6/SIPR access for classified network use.

Commercial: ChatGPT, Gemini

Approved for **unclassified** work only via vendor websites. Supplement DoD tools when CUI is not involved. Also available inside GenAI.mil.

Always

PII must be anonymized on every platform unless a PIA explicitly authorizes it. Sensitive or classified data never enters unauthorized systems. See the EDD *Approved Tools* page.

SPEAKER NOTES

BRIEFING — 30 MIN

Fast walk: "Default is GenAI.mil — IL5, CUI, MARADMIN-designated. CamoGPT for Army-shared capabilities including SIPR/IL6. ChatGPT and Gemini via the public sites for unclassified only. PII gets anonymized everywhere unless a PIA says otherwise."

If a supervisor asks about a specific tool not on the slide, point at the EDD Approved Tools page.

JOINT SESSION — EXTENDED

Ask builders: "Which platform are you on most days, and what made you pick it?" Quick room calibration.

TRANSITION

"Two short documents to hand your CO if you need air cover."

Two briefs to hand your CO

EDD Executive Brief

15-slide Teams briefing. The "what is EDD, why now, what we're asking from leadership" deck — designed for an O-5/O-6 audience.

docs/pdf/EDD_Executive_Brief.pdf

EDD RAI Compliance Brief

One-page compliance map: how the EDD program aligns with DoD AI guidelines and Responsible AI guardrails. The document for your staff judge advocate or compliance officer.

docs/pdf/EDD_RAI_Compliance_Brief.pdf

If you only forward one thing after this session: **send the Executive Brief to your O-5/O-6 with one sentence — "We are doing this; here is the structure."**

SPEAKER NOTES

BRIEFING — 30 MIN

"Two PDFs in the EDD repo. Executive Brief is your air-cover document with senior leadership. RAI Compliance Brief is your air-cover document with your judge advocate or compliance officer. Both are short. Both are designed to be read once and forwarded."

JOINT SESSION — EXTENDED

If running joint, ask: "Who in this room has already had the AI conversation with leadership? What worked, what didn't?" 60 seconds, then advance.

TRANSITION

"Brief look at next week so you know what your builders are heading into."

The bonus capstone

- **Audience:** advanced builders only (elective — has prerequisites)
- **Duration:** 8 hours, builder-track
- **Outcome:** direct AI to write a complete Go + React + Docker application
- **Pattern:** full Cyborg-mode at full-stack scale
- **Prereq:** Advanced Workshop completed + at least one deployed tool

What this means for supervisors

Most of your Marines will *not* take Course 6 — and that's by design. It's for the small group whose problems exceed the Power Platform envelope.

If a builder in your section asks about it, the question to ask is: *"Show me the deployed tool you built first."*

SPEAKER NOTES

BRIEFING — 30 MIN

Quick. "Week 6 is the full-stack capstone. Most of your section won't take it. The ones who do will already have a deployed tool and a clear use case the Power Platform can't handle." Don't oversell it — supervisors don't need to evaluate Go/React/Docker. They need to evaluate whether a Marine has earned the seat: deployed tool first, fancy stack second.

JOINT SESSION — EXTENDED

Ask any builders present: "Anyone planning on Course 6? What's the problem you can't solve in Power Platform?" Calibrates the room on what "earned the seat" actually looks like.

TRANSITION

"Last slide. The commitment."

LEADERSHIP COMMITMENT

The structure exists. Your people have the motivation. Your job is to give the permission.

WITHIN THE NEXT WEEK

Ask one person in your section what they'd build if they had permission. Listen to the answer. Then say *yes, with appropriate review*.

SPEAKER NOTES

BRIEFING — 30 MIN

End on time. Don't add slides. Read the headline aloud, then the ask, then thank them and stop.

"Within the next week, ask one person in your section what they'd build if they had permission. That's the only homework. If you do that one thing, this 30 minutes was worth your time." Hold a beat. Don't rush off. Let the ask sit.

JOINT SESSION — EXTENDED

Build a closing accountability moment: "Supervisors — say out loud who you're going to ask, and by when. Two sentences each. Builders — your job is to remember who said your name." Quick round, then close.

Final sentence: "EDD provides the structure. You provide the permission. Go give it."
